Message from the G B President

Education shapes the destiny of a nation. Of all the resources available in a society, human resources play the pivotal role for its growth as well as development. In a society having honest, efficient, dynamic and hard working people with a positive frame mind and social commitment, development will naturally be faster and equitable. In spite of so much of resources available in India and in Assam, the development scenario has not been satisfactory only because of the comparative lower quality of human resources.

Educational institutions are the factories of creating quality human resources. Considering importance of education, the socially conscious people of greater Narang area established Narang Anchalik Mahavidyalaya in 1991. The efforts and sacrifices of the people have borne fruits as the college has been playing a significant role in fostering higher education in the last two and half decades.

It is heartening to note that after waiting eagerly for several years, the college has ultimately been provincialised. Again, preparations have now been going on for celebrating its Silver Jubilee in 2015-16.

More than two thousand students from the easternmost part of Guwahati city, its neighboring rural areas and the entire North East have been studying in Arts and Commerce streams of the college and many of them have earned laurels within this short tenure of the alma mater.

"My message, especially to young people is to have courage to think differently, courage to invent, to travel the unexplored path, courage to discover the impossible and to conquer the problems and succeed. These are great qualities that they must work towards. This is my message to the young people."

"Don't take rest after your first victory because if you fail in second, more lips are waiting to say that your first victory was just luck."

"Be more dedicated to making solid achievements than in running after swift but synthetic happiness."

"All of us do not have equal talent. But, all of us have an equal opportunity to develop our talents."

"Dreams are not those which comes while we are sleeping, but dreams are those when you don't sleep before fulfilling them."

"Confidence and Hard work is the best medicine to kill the disease called failure. It will make you successful person"

"Some of the brightest minds in the country can be found on the last benches of the classroom"

"Difficulties in your life do not come to destroy you, but to help you realize your hidden potential and power, let difficulties know that you too are difficult"

"Thinking is the capital, Enterprise is the way, and Hard Work is

"This is my belief that through difficulties and problems God gives us the opportunity to grow. So when your hopes and dreams and goals are dashed, search among the wreckage, you may find a golden opportunity hidden in the ruins".

Euro Currency

Ruksana Khatun
Dept. of Economics

One currency many world, Euro is a single currency which runs in 12 European countries that is Austria, Belgium, France, Finland, Germany, Greece, Ireland, Italy, Luxenburg, Netherland, Portugal, Spain. An Indian traveller in Bhutan cannot purchase any thing with Indian rupee unless he/she exchange into Bhutan currancy Nugultrum.

An Indian firm cannot purchase jute raw material from Bangladesh unless he/she exchange INR to Taka.

But how easy here!!! A traveller from France, he/she can purchase anything in any shop in any mall and also can pay same Euro to the local transprt within above mentioned 12 countries. A firm from Italy can easily purchase raw materials from the above any 12 European countries with his same Euro.

Question to think?

Can India and its neighbouring countries Srilanka, Myanmar, Bangladesh, Bhutan, Pakistn, Afghanistan can takes steps if common currency like Euro??

Kailash Satyarthi

(Nobel Peace Prize winner for the year 2014)

Sagarika Choudhury
Asstt. Professor
Dept. of Education

Kailash Satyarthi, who is 60 years old has been awarded the Nobel Peace Prize for this year. Satyarthi is the first Indian born Nobel peace prize winner.

This is not just an award for him but for those children whom he rescued working in brick factories, at home, tea stalls, carpet factories etc.

Satyarthi was born in Madhya Pradesh. The 60 year old Delhi based child right activist who has freed 80,000 odd child laboures in the past three decades is an electrical engineer who decided to give up his polytechniques teacher's job at the age of 25 to fight child

trafficking and bonded child labour in factories and firms.

Satyarthi, who lives in Delhi with his wife, son and daughter is the founder of the 'Bachpan Bachao' andolan dedicated to ending bonded and child trafficking and also has set up several shelter homes that give livelihood training to the rescued children. He and his team rescued children forced to work in embroiderying textiles or weave carpets, work in sweet shops or tail in rice fields. He was previously assaulted while freeing Nepali Circus girls in Gonda, Uttar Pradesh and his office was vandalised repeatedly. Showing great courage, he followed the principle of Gandhiji and he led various forms of peaceful protest and demonstrations which focused the exploitation of children.

Satyarthi will share the award with Malala Yousafzai, the young Pakistani education activist whom the Taliban had shot when she was on her way to school. She is the youngest winner of Nobel peace prize. She began campaigning for girls' education at a very young age. She defied terror, showed extraordinary courage and inspired hope in millions of women. It would be excellent if these two icons from India and Pakistan can work together to secure the rights of children.

Mary Kom

Shweta Singh
BA, 4th Sem

Mangle Chhuningleng Mary Kom was born on 1st March, 1983, at Kangathai in Churachandpur, district of Manipur. Her parents, Mangte Tonpa Kom and Mangte Akham Kom, worked in Jhum fields. She completed her primary education from Loktak Christian High School and St. Xavier Catholic School upto class VIII and passed her examination from NIOS Imphal and graduated from Churachandpur college.

Although she had interest in athletics from childhood, it was the success of Dingko Singh that inspired her to become a boxer in 2000. She started her training under the close eye of Mr. Nagul Singh, Manipur State Boxing coach at Khumarampuk, Imphal.

She is a five times World Amateur Boxing Champion and the only woman boxer to have won a medal in each one of the six world championships. She is the only Indian boxer to have qualified for the 2012 Summer Olympics, competing in flyweight (51 kg) category and winning bronze medal. She has also been ranked as No. 4, AIBA World Women's Ranking Flyweight Category. She launched her autobiography 'Unbreakable' at the Forum Mall, in Bangalore on 11th December 2013. Kom also has started a female-only fight club at Imphal to teach girls to defend themselves against sexual violence in India.

Gabriel Garcia Marquez

Nirmeeta Bhardwaj
BA, 4th Sem

Gabriel Garcia Marquez, author of 'Love in the Time of Cholera' has gained worldwide readership with his brand of magical realism.

He was born on March 6th 1928, and grew up listening to family tales. After college, he became a journalist. His work introduced readers to magical realism which combines facts and fantasy. His novels 'Cien años de soledad' (One hundred years of solitude) and 'El amor en los tiempos del cólera' (Love in the Time of Cholera) have drawn worldwide audiences. He won a Nobel Prize in 1982. He wrote a lot about Aracata, Colombia, specially his grandfather's stories and his parents' daring adventures.

In the last few years, Marquez has explored his own life in his work. His memoir 'Vivir para Contar' (2002), published as 'Living to Tell The Tale' received warm reviews and accolades from critics and fans. Throughout his career, Marquez has won numerous awards and honours for his work, including the 1982 Nobel Prize in literature.

Poor Family's Rich Heart

Sanjukta Ray
BA, 3rd Semester

I and my wife were on a camping trip. We were expecting it to be the best trip, but everything went wrong when we got caught in a heavy rain and storm. Our tents and bags were blown away by the flood and we were drowning in the river. The last word I said to my wife was 'keep breathing and swimming honey. We are going to live long because we love each other so much.' After that my head hit against a stone and I fainted. But before closing my eyes, I realized that my wife was holding my hand.

When I woke up, I was in a kind of small hut on a dirty blanket on the floor. I heard the voices of people talking beside me. I looked around and found my wife sitting with a couple and three kids. I tried to sit and when the man saw me, he helped me sit supporting my back against the wall. He asked his wife something and they gave me some kind of soup.

I had always seen my wife wearing thousand dollars gowns and dresses but right now I saw her wrapping a short smelling blanket around her. My wife also having the same soup with those kids of that couple. After introducing ourselves and knowing how we reached in their house and how they saved us, we decided to leave.

But the man asked us to stay for a night as it was still very rainy and stormy outside. We didn't have any other way so we agreed to stay for a night.

The man left the house in search of food and the woman was trying to dry our clothes on the fire. My wife was looking at me. I felt like, she was thanking me but I didn't know for what. By the evening the man came back. He had few fishes and some fruits, he gave them to the women to cook and serve. After 20 minutes the dinner was waiting for us, we all sat in a circle and the woman started serving the share though it was not enough for all of us. We were really hungry and we finished it in seconds, but we still needed more. The man and their kids were still having their food, me and my wife were looking at them like hungry dogs. The man looked at us and gave us more food from his plate, his wife and kids followed him and they also shared their food with us. We were feeling so poor in front of them. They had already shared their food with us and now they were sharing more. Their kids were also smiling after giving us their food.

The Evergreen Saraihat

Preetymala Baruah
Asstt. Professor
Dept. of History

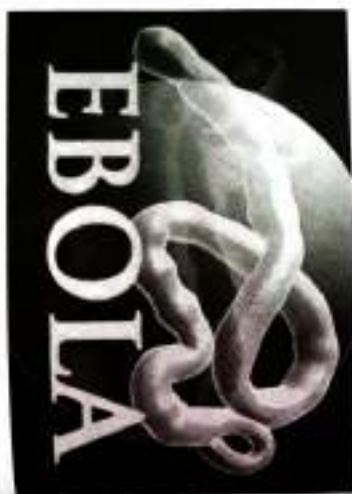

So long as the mighty Brahmaputra or 'Uhlif' as it is adoringly called in Assam, the singularity and the art of bravery of the Battle of Saraihat will be engraved in golden letters in the history of Assam. The Saraihat War won a shining reflection of the craftsmanship and efficiency of the Assamese soldiers, the leadership of the Ahom General's theme sense of responsibilities, the discipline and organisation of the military power, the indomitable sense of patriotism. The spontaneous response of the Assamese to the call of the hour, the exemplary courage, sincere dedication to work in amply reflected in the Battle of Saraihat. The Saraihat episode is enough to give us lessons to arouse national consciousness and unity among the Assamese. Lachit's Saraihat is no more today, we still have our Saraihat, it is so dear to us and which is a symbol of Assamese unity.

I was a very rich man who didn't know anything about humanity and help. I always preferred money and thought that I was the richest person on the earth. But right now no other man would be poorer than me. We never treated our friends and relatives like this couple and their kids. We were complete strangers for them but they were true human beings and knew how to treat any creature in the world.

My wife started crying when the kids shared their food with us. We had two kids and they never showed any love like this which was also our fault, because we never taught them how to love, we never told them that love is more important than money. But these people who were living in this forest taught us how to treat others share and show humanity.

Ebola Virus Disease

Deepanjali Das
Dept. of English

What is the Ebola Virus?
Ebola disease also called Ebola hemorrhagic fever is a rare and often fatal illness that humans had non-human primates can contract. There have been several outbreaks of Ebola fever in Africa. These virus is found in Africa and the Philippines, but the virus from Philippines does not cause illness in humans. It was discovered in 1976. According to the Centers for Disease Control and Prevention, there have been 2,265 reported cases of Ebola fever in humans around the world since 1976 of these, 1,531 resulted in death (CDC, 2012).

Types of Ebola Virus

- * Ebola - Zaire
- * Ebola - Sudan
- * Ebola - Ivory Coast
- * Ebola - Bundibugyo
- * Ebola - Reston

Symptoms of Ebola fever

- * Fever, headache, sore throat, joint and muscle soreness, weakness.

Ebola Fever Treated

Oxygen - therapy, intravenous fluids, blood transfusions, medication to treat shock, pain medications.

When to call a Doctor?

To call doctor right away if symptoms of Ebola fever and have recently traveled to Africa or been exposed to the Ebola Virus.

Co-ordination Among Teachers & Guardians

Bhamini Bhandare
B.Com, M.A., M.Ed.

I am a student and as such my primary duty is to study. Whatever work I may have, I must give more

importance to my studies. As a student of Narsang Anchalkar Mahavidyalaya, I am learning and acquainting myself to build up my future. Sometimes we are offended when teachers punish us. But at the hindsight, I think punishment is necessary to reform us or modify our behaviour. Teachers do not punish us for nothing, they do so for our improvement.

Our parents showed us this world but our teachers are moulding our future for the better, with their knowledge and hard work. They are our friends, philosophers and guides. Each student has individual competence. Some of us comprehend sooner what is taught, while some others take a little longer. Teachers do not punish us because we understand less but they punish us to prevent us from doing things we ought not to.

In this regard parents must give more time to their children regarding their studies and teaching adequate behaviour. I think most of the students would then misbehave, whether inside or outside the colleges. It is not that only the teachers have to build our character, our parents should equally entrust themselves with the task of taking proper care so far our conduct is concerned. If our parents take interest to mould our behaviour and conduct, I think the rest will be taken care of by the teachers.

It is also not fair on the part of our parents to come with non-stop complaints about their children. Why should our parents complain to teachers? If there is any mistake, why don't our parents correct at home? A teacher has to impart lessons, see and correct class work activities. They are already overburdened.

So, it is my humble request to our parents, to correct their children at home, co-operate with teachers and share the burden with them. Then we shall all grow to see the world in a better way. There would surely be peace and harmony inside and outside the school and college campus.

Importance of Computer in Present Era

Sri Nitul Talukdar
HS, 2nd year

According to a survey carried out by an international magazine the 'Man of the year' in 1982 was computer. Computer in Latin means 'to reckon' or 'to compute'. Some experts have coined word for it 'INFORMATIC' the science of information processing i.e. methods of recording, Manipulation and retrieving informations. So it is a calculating device with some special characteristics and abilities like perform complex and repetitive calculation rapidly and accurately, make decisions and automatically correct or modify by providing signals, certain parameters of a system under control, converse with users through terminals etc.

As we hurtle towards the 21st century we must accept the inevitability of a computer revolution in the near future. It is an inseparable part of development, as demonstrated by other countries. Computers are no longer luxury or the sole property of the advanced countries. Their appropriate uses in India can help us solve the unique problem of a developing country and bring about the desired changes in increasing literacy, optimizing resources, increasing efficiency, productivity and quality.

Computers can substantially save valuable man hours by helping people through communications to make reservations of tickets, operate their Bank accounts, to pay for electricity, water and telephone bills, insurance premium and also do routine shopping. Trains can be operated automatically by computers and traffic signals be computer co-ordinates to produce best traffic patterns, increase reliability and safety and generally provide for more efficient service.

In the most important area, of government administrations, to enable administration take the right decision at the right time, accurate, relevant and up to date information should be made available to them. Modern computerized communication network can significantly help bureaucracy cut its red tape.

Therefore, computers are synonymous with development with appropriate computer usage and quality of life applications, India will be able to effectively tackle its unique problems. The entire society will undergo a transformation and what would emerge in a society that is more intellectually aware and which value is time, intellect and dignity. A society armed with computer expertise can meet with confidence the exciting new India of tomorrow.

A Golden Experience

Dhiman Singha
B.Com, 2nd year

It was a cold, chilly December morning. I woke up little earlier than my fellow cadets (students) and went out of my room to have a view of the still, silent Sarusajal Stadium at Lakhara. It was the day of our selection for the Republic Day Camp, 2011-12, nearly 900 cadets from all over North-East thronged the Sarusajal Stadium. Lt. Col. Rajib Ghosh [now an ex-army officer] was our commanding officer who was from Artillery and we were trained by officers from the Gurkha Regiment. During the course of the two months training, many cadets got eliminated at different times. As these thoughts were coming to my mind, I heard our officer calling out to the cadets to get ready for the final selection. I went back to my room and after a while came out to the hall in my Naval NCC uniform with the other cadets. We all stood in line as the officer was calling out the names of the selected cadets. An impulse of excitement and nervousness ran through my body. And when I heard my name being called out, my excitement doubled. I immediately made a phone call to my parents and was more happy to feel the tone of happiness in their voice as well. Finally I was one among the 103 selected cadets which included 12 from Naval, 12 from Air Force and 79 from Army NCC to parade in Delhi.

It was midnight on December 27, when we went to the Guwahati Railway Station and our train to Delhi was early morning the next day. We slept on the platform that night and the next morning we were in the train to Delhi. The train started slowly and the past reflections of how I convinced my parents for this camp and how our A.N.O of B.Borobash College Sub. Lt. Dr. Jagesh Regu and our 48 Assam Naval Unit N.C.C.P.I. Staff inspired me to go for this camp which came to my mind. We reached Delhi at 10:45 am on December 29, 2011. Three army buses came to the station to take us to R.K.Puram, Delhi where the arrangement of our staying was done. The practice for the Republic Day parade, Guard-of-Honor, Horse riding and other activities started from the next day onwards. Preparations for the Republic Day and other activities was on full swing in Delhi. On the 11th January, 2012 we were taken to visit some of the historic places of Delhi. We were visited Qutub Minar, Red Fort, Lotus Temple and India Gate and on 12th January we visited Akbar's Tomb and the Taj Mahal which was wonderful. On January 15, we were taken to the residence of the Chief of Navy. Our final practice for the parade was done on January 23rd in Rajpath. After the day's tough practice I went in my room for a while and made a phone call to my mother for I was terribly missing my parents. My eyes almost got moist while talking to my mother but on hearing the call for dinner I ended the call and went out to the dining hall. The next day, the selection of cadets to parade on January 26th was done. Unfortunately, luck was not in my favour that day and only a few cadets got selected. But it was not the end! I was one, among those cadets who were selected for the Prime Minister's Rally on January 26th. We watched our fellow cadets parading on the Rajpath on January 26th from the auditorium and on January 28th I was thrilled while doing march-past in front of the Prime Minister of our Nation. It was our last day in Delhi and on January 29th at 12 am we were in the train to Guwahati. We reached Guwahati on January 31st and from the station we were taken to the army camp at Naengi. We were felicitated by our Group commander Col.

Rahul Ball on February 1st for we raised the rank of NER (North East Region) from 17 in 2010-11 to 13 in 211. 12. we were taken to the Governor's residence on February 4th and the next day we were allowed to go back to our homes. The day was an emotional one as we hugged each other and said Good bye before heading home. On reaching home back to my dear parents I was very happy to see them and I am proud to be a son of the camp and the memory of that camp will stay in my heart forever.

Pandit Jawaharlal Nehru

Mukta Purkayastha
Asstt. Professor
Dept. of English

Pandit Jawaharlal Nehru needs no introduction to the Indians, as he was famous not only as a Political figure but also as a true social thinker. He was born in the well-known family of the Nehrus. Born on 14th November, 1889, in famous Anand Bhawan in Allahabad, Nehru was brought up a musty many social ideals. Little Nehru was much impressed by his father's teachings. Everything that happened in the surrounding left an indelible mark in his young mind. Nehru had his education both in Harrow School and Cambridge University. Returning back to India he joined hands with other freedom fighters. During this period he was imprisoned many times in different jails and his experiences were later penned down in his famous book 'Discovery of India' which was written exclusively for his daughter Indira Gandhi.

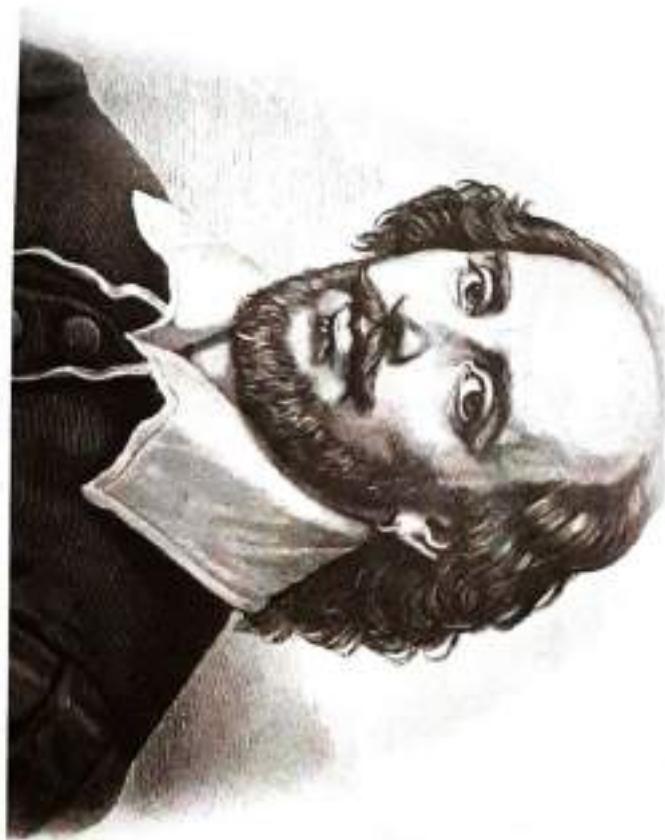

Apart from being a political figure Nehru was a lover of flora and fauna. His most beloved were children and roses. For him children were the future citizen who has to be lovingly and carefully nurtured like the delicate flowers of a garden. He was called 'Cachcha Nehru' and his birthday is celebrated as 'Children's Day' all over the country.

Nehru breathed his last on 27th May 1964 and was cremated at Sarnitha near the banks of Jamuna river.

1. The exact date of Shakespeare's birth isn't actually known. He was baptised on April 26, according to church records, and baptism usually took place two or three days after birth. Shakespeare died on April 23, so the date has come to be marked as his birthday as well.
2. Shakespeare's birthday has been celebrated in his hometown of Stratford upon Avon for almost 200 years. This year, the two day party included music, drama & parade.

10 surprising, Interesting and Little known Facts about William Shakespeare

Rupplekha Phukan Barthakur
Asst. Professor
Dept. of English, NAM

3. Closer to home, the Stratford festival in Stratford, & aged fine Shakespearean productions, including two different versions of 'A Midsummer Night's Dream'. They also hosted a few of different events commemorating the anniversary, such as a display of the only Canadian copy of the playwright's First Folio.

NEPAL SOJOURN

4.: The Globe Theatre in London, where Shakespeare's acting company performed, also marked the anniversary with the intention of staging production of Hamlet in every country on Earth even North Korea the 16-strong cast and crew started with three performances in London, before hitting the road for the two-year world tour.

5.: At 18, Shakespeare married Anne Hathaway, a local farmer's daughter. Little is known about her, except that she shares a name with famous American actress. The other Anne Hathaway who has starred in less Miserables and the Dark Knight rises has never appeared in a Shakespeare movie, although last year she was rumoured to be involved in an adaption of Shakespeare's 'Taming of the Shrew'.

6.: Shakespeare was a prodigious writer. He ranked out 37 plays, roughly two per year between 1594 and his retirement in 1611.

7.: Hamlet is actually the Bard's longest work at 4,024 lines, according to an analysis by the website play Shakespeare.com. His shortest play, 'The Comedy of Errors', is a mere 1,785 lines.

8.: Every day we quote Shakespeare without even realising it. His plays are some of the earliest examples of many common English phrases, including 'Mum's the word' (Henry VI), A wild goose chose. (Romeo and Juliet), 'Wear your heart on your sleeve' (Othello) and 'A heart of gold' (Henry V) according to the Independent.

9.: Long before 'selfie' and 'unfriend' entered the English lexicon Shakespeare was making up his own words, after turning nouns into verbs, or adopting words from other languages. His inventions that we still speak today include 'assassination', 'frugal', 'luggage' and 'swagger'.

10.: Out of all Shakespeare's characters the one who gets the highest cumulative number of speeches is the knight Falstaff, who speaks 471 times across Henry IV part I, Henry IV Part II, Henry V and The Merry Wives of Windsor, according to an analysis.

It had been intended and conceptualised that a trip to Nepal specially Pashupati and Manakamna would be undertaken and finally the day fixed was 27th May 2014. With heavy hearts at leaving our family behind but with a dream of making the trip a memorable one, the five of us, Rupilekha, Karabi, Nira Bahadur, Irani Bahadur and myself set for LGTB to catch our flight to Bagdogra from College. Once at Bagdogra airport we faced the first tension having to wait for one hour to collect our luggage. We had a 3 pm Yeti flight to catch from Chabragaddi Airport for Kathmandu. The travel agency had everything ready, we managed to reach on time and landed at Kathmandu airport at around 4.15 pm. The hotel car took us to Hotel Nepalaya right in the heart of the city at a place called Thamel. We took tea at the roof-top restaurant and somehow refreshed we made a small tour of the city specially calling our families back home.

The next morning we visited the world famous Pashupati Temple the reigning deity of the country and one of the most visited Hindu temple in the world. This was my third visit, first time with my mom and dad, the second time with my husband and son and the third time with my colleagues. Each visit had its own essence and wanted it to be a lifetime experience with my friends. We had to be in the queue for sometime, we lighted the diyas and paid our obeisance to the Almighty Pashupati the protector of all the animals and living beings. Pashupati is a three tiered pagoda of gold gilt and brass of which the gateway is plated with silver. It is situated on the western bank of the river Bagmati. Pashu signifies all living beings or jivatma and pati denotes master or Lord. There are legends about the stories of this temple especially the one where Lord Shiva and Parvati visited the Sheleshmanta forest now known as Mitigastali in the guise of a deer and stayed for a long time. This caused anxiety to other Gods and the three deities-Brahma, Vishnu and India came to the forest and caught the deer who was Lord Shiva and the horns broke into three pieces which were established in three different places of Nepal, one being the Pashupati temple itself. My four friends went crazy buying various gift items for people back home specially (poet) the glass beads very popular amongst the married women. After that we visited the city attractions-Swayambhunath Stupa, a sacred Buddhist stupa on a hill overlooking a good view of the Kathmandu city and snowy mountains in the horizon. The stupa is composed of a solid hemisphere of brick and earth on a large square platform. The hemisphere represents Garba or womb, the seat of creation. There are images of Dhyan Buddha and on the four torans are painted in the eyes of Buddha, on the cube. Next on our agenda was Budhanilkantha where a colossal image of God Vishnu reclining on serpents carved from a great block of stone lies in a pool of water. The image of God is hooded by eleven serpents, and has four hands lined with chakra (disc), gada (club), Padmabija and sankha (conch) it has been hailed to be built in the seventh century. We also visited the Kathmandu Durbar Square, Hanuman Dhoka and Bahal the dwelling of the living Goddess Jai Kumari.

another important religious implications of the country. We shopped though not very satisfied as we had little time, because next day we had a long journey to Champara Pokhara. The next day we began our journey to Manakamana en route to the picturesque town of Pokhara. Pokhara is a quaint, quiet, serene and peaceful town. It was an interesting journey as we had to reach the peak of the mountain travelling in a cable car, it can be quite scary to some but very unique to others. The white river, the tall trees, the fast cool breeze, the anticipation and the touch of modernity, the new mobile towers add a variety of ushing feeling mind's eye for ever. The beautiful swirling river, the snaking Prithvi Ra Jatra Marg from above looked extremely different than what they are when seen down. Maa Manakamana has her abode in the serene and almost virgin hills, 105 km west of Kathmandu in the Gorkha district. The cable car starts at the height of 2600 m above sea level and ends at 3100m high, is the longest in Asia. One can get a panoramic view of the Himalayan range from the hillocks. Maa Manakamana is enshrined within the temple, is one of the manifestations of the Hindu Goddess Bhagwati who is credited to have the assurance of fulfilling each and

were perfectly chiselled while bidding good-bye to the shopkeepers with a quaint 'Tayga' which actually was the Assamese 'ahisu'. And Karabi went beserk with her 'kula mai linchu', meaning she will take it in her lap whatever it was. Rupplekha was understood well while Iraji Baijdeo quietly stole the show with her soft manners. Later in the evening, we hired a boat to visit the beautiful Baraha Mandir situated right in the center of the Fewa Lake. It was an enjoyable boating experience, specially the view of the para-gliders floating in the air was simply fascinating. It was the last day, we felt a heaviness as the holiday was coming to an end. But we were also happy to be back to our families and specially dear old Guwahati. We took a flight back from Pokhara bidding adieu to the tall minarets of the snow who stood far to witness our return to home ... After landing at Chandigarh, we took a taxi to Bagdogra to board our Guwahati flight. As we landed at our familiar LGBC, it was as if our city was waiting to embrace us back to our old familiarity. I think we had real fun, and am sure it was an unforgettable sojourn for all of us. Until the next time, friend 'tis 'Bon Voyage' to all of you who love to travel.

every devotees for their wishes. People come here from far and near to seek the blessings of the Goddess and fulfill their innermost feelings. After paying our obeisance to Maa Manakamana, the wish-fulfilling deity we were very happy as finally our wish of visiting together had been fulfilled. My friends gorged on typical Nepali food here and with somewhat heavy hearts we bid goodbye to the spiritual bonding we had felt. We still had a long way to Pokhara. By evening we reached our beautiful hotel, Third Pole, very tired yet with enough enthusiasm to take a small tour nearby. That night in Pokhara my friends tried out on sliders with great gourmet festivitis, but yours truly had to be satisfied with French fries and two huge cups of coffee. The taste of the freshly ground coffee left a lingering never forgetting taste behind. I have a feeling those sliders will never be forgotten by my friends for a long time to come. We slept like logs that night, getting up in the morning with Rupplekha's advice back home and yoga sessions with Karabi. I walked to the balcony to chat with Iraji Baijdeo and Iraji Baijdeo from the adjoining balcony and enjoying the call of the Fewa Taal or Lake from a distance. That day was earmarked for the city tour and boating in the Fewa lake in the evening. We had a day long tour visiting Devi Falls, Gupsethwar Gufas, Durgatinashini Mandir. It was fascinating to watch the rows of shops selling tunics, mementos and especially the local people conversing in Chinese, Korean, Thai, Hindi is the second largest language spoken in Nepal after Nepali. As we were in burning sun it was utmost fun to see Iraji Baijdeo and Karabi trying their best to get the better of the shopkeepers as they bargained with their new sought knowledge of the Nepali language. Iraji Baijdeo's good manners

the Assamese 'ahisu'. And Karabi went beserk with her 'kula mai linchu', meaning she will take it in her lap whatever it was. Rupplekha was understood well while Iraji Baijdeo quietly stole the show with her soft manners. SOLID WASTE DISPOSAL: ENVIRONMENTAL HEALTH ISSUES IN GUWAHATI CITY

Dr. Lakshmi Gogoi
Assistant Professor
Department Of Geography

Environmental health is the branch of public health that is concerned with all aspects of the natural and built environment that may affect human health. Environmental health comprises those aspects of human health, including quality of life, that are determined by physical, chemical, biological, social and psychosocial factors in the environment. It also refers to the theory and practice of assessing, correcting, controlling and preventing those factors in the environment that can potentially affect adversely the health of present and future generations.

Through the boundaries of environmental health are not rigidly defined. The challenges and priorities of environmental health vary between communities, and the possibilities can be shared in many ways. While some people spend more time than others working on these problems, we all affect environmental health through our individual and collective decisions.

The environmental health issues arise in three ways in the context of development. Any change in the natural environment, any change in the built environment and any change in access to environmental services has implications for health. The natural environment comprises of three elements such as air, water and soil. Clean air, water and soil are essential for better physical environment. It protects the human health. A better health has also a better mind which impact on the development in the society.

Some of the more commonly reported environmental health issues are improper disposal of municipal solid waste. Solid waste disposal poses a greater problem because it leads to land pollution directly if openly dumped, water pollution if dumped in low lying area and air pollution if burnt. The quantity of municipal solid waste generated in Guwahati has been consistently rising over the years. This can be attributed to the rapid population growth, mass migration of population from rural to urban areas, increase in economic activities in general in the city and the change in lifestyle of the people. The ever growing amount of municipal solid waste is disposed here and there in the city and ultimately it stands as a problem to the civil society. It contaminated the air, soil and water also. The water contamination is directly linked to the human health and causes different types of water borne diseases.

STRESS IN STUDENT'S LIFE

Banajyoti Sarma
Assistant Professor
Department Of Economics

The human body tries to adjust itself to different circumstances or continually changing environment around it. In this process the body is put to extra work resulting in 'wear and tear'. In other words the body gets stressed. Stress disturbs the body's normal ways of functioning. Stress is the feeling of an individual towards any situation, problem or demand, which affects his/her psychological or physiological actions.

Stress is an unavoidable part of life. The challenges caused by stress help one to develop new skills and behavior patterns. The problems occurs however, when stress become excessive. It can become destructive. Too much stress on the mind and body can make people miserable, worried, sad and ill.

Adults commonly tell young people that the college years are the best years of life. The rosy

remembrance highlights how groups of students energetically involved at studies and sporting events. This is only one part of the picture. College life is often seen as the time of 'Storm and stress'. Within this stage there is a great deal of variation, though individual factors a specific kind of stress in this period. Like for many young people is a painful tug-of-war filled with mixed messages and conflicting demands from parents, teachers, coaches, friends and oneself. Growing up negotiating a path between independence and reliance on others is a tough business. It creates stress and it can create serious depression for young people.

Stress exists from the change in an individual's thinking and their lifestyle nowadays. Now, individuals have changed their perceptions and the way they interpret their life. Students in their teens are the ones who are growing through the transition phase, which are an intermediate of childhood and adulthood. During the teen years, a lot of biological, physical, mental, and emotional changes are happening, as well as with problems and conflicts. For students who are not capable of dealing with it, the changes will create stress and tension to them.

Stress is believed to be caused by the various problems that exist such as problems at schools, financial problems, family problems and problems in their surroundings. Students also experience stress because they are sometimes trapped between making decisions, which is to follow rules and orders. Teenagers in the previous days were trained for things that were suitable with their age, so that they can use it to manage their lives. But now, teenagers have to follow their parents' desires, which are compelling them to compete in a system where society is scrambling towards modernization so that they are not left behind. If it is not managed well, stress can ignite psychological disturbances among them when they are grown up. These disturbances will cause stress to the teenagers in the future if they are not overcome now.

The world has today 546 nuclear plants generating electricity. Their experience is being continuously reviewed, and feedback should be provided to all. Nuclear scientists have to inform generation technology and safety. A P.J. Abhi/Kulam

POSITIVE THINKING: A BLESSING

Rosie Patangia
Assistant Professor And Head, English

'If a man speaks or acts with an evil thought, pain follows him. If a man acts with a pure thought, happiness follows him, like a shadow that never leaves him.'

Gautam Buddha

Our life is a conglomeration of two kinds of things... Positive things and Negative things. We create our own destiny with our thoughts. If we give out positive thoughts and feelings, we attract positive circumstances, people and events that bring us prosperity and happiness to our lives. When we talk about a bad event in a news or speak ill of a person, we are not talking about what we love.

According to Rhonda Byrne, if we persist negative things and speak about the things we don't love, we are literally jailing ourselves like a parrot in a cage. Every time we talk about what we don't love, we are adding another bar to the cage and we are locking ourselves away from our goal. Swami Sivaramanda states that our thoughts are living beings. We may cease to live but our thoughts never die. Every thought is conveyed to the cells. If there are confusion, depression and negative thoughts in the mind, they are telegraphically transmitted through the nerves to every cell in the body. The soldier cells become panic-stricken. They become weak and inefficient and we fall sick.

Every thought has got weight, shape, size, form, colour, quality and power. A spiritual thought has yellow colour. A thought charged with anger and hatred is of dark red colour. A selfish thought has a brown colour.

The law of thought says that if we hurt others, if we do back-biting, tale-bearing, if we exploit others and if we do any action that can give pain to others, we will reap pain. We will get unfavorable circumstances or environments.

Thus we need to practice Ahimsa in our thought, word and action. Mahatma Gandhi, the father of our nation, was a staunch follower of Truth and Ahimsa. As a result he transformed the Indian masses through his good thoughts and good actions.

Thus it is very necessary for us to give love to others through kindness, encouragement, support, gratitude and it will come to us multiplied in every area of our life. We need to avoid criticizing, blaming, complaining, nagging or finding fault with another person. Thus when we love others we love ourselves and thereby increase our longevity as a beautiful human being.

Topic on Role of Psychology in formation of Personality of an Individual

—Rekha Ranjita Das
B.A. 4th Sem
Dept. of Education

Personality psychology is a branch of psychology that studies personality and its individual difference. Its areas of focus include:

- * Construction of a coherent picture of the individual and his/her major psychological process.
- * Investigation of individual difference.
- * Investigation of human nature and human similarities.

Personality is a dynamic and organized set of characteristics possessed by a person that uniquely influences his or her cognitions, emotions, motivation and behaviour in various situations.

The word 'Personality' originates from the Latin word *persona*, which means 'mask'. In the theatre of character, but instead was a convention employed to represent or typify that character.

Personality also refers to the pattern of thoughts, feelings, social adjustments and behaviour consistently exhibited over time, strongly influencing one's expectations, self-perceptions, values and attitudes. It also predicts human reactions to other people, problems and stress. There is still no universal consensus on the definition of personality in psychology. Garden Alport (1937) describes two major ways to study personality: the nomothetic and the idiographic. Nomothetic psychology seeks general laws that can be applied to many different people, such as the principle reviewed as a prerequisite to courses in abnormal psychology or clinical psychology.

Philosophical assumption [edit sources/editsbeta]

Many of the ideas developed by historical and modern personality theorists stem from the basic philosophical assumptions they hold. The study of personality is not a purely empirical discipline, as it brings in elements of art, science and philosophy to draw general conclusions. The following five categories are some of the most fundamental philosophical assumptions on which theorists disagree.

1. Freedom versus determinism:

This is the question whether human's have control over their own behaviour and understand the motive behind it or their behaviour is causally determined by force beyond their control. Behaviour is categorized as being either unconscious, environmental or biological by various theories.

2. Heredity versus Environment:

Personality is thought to be determined largely either by genetics and biology or by environment and experiences. Contemporary research suggests that most personality traits are based on the joint influence of genetics and environment. One of the forerunners in this field is C. Robert Cloninger, who pioneered the temperament and character model.

3. Uniqueness versus Universality:

This question discusses the extent of each human's individuality (uniqueness) or similarity in nature. (Universality). Gordon Allport, Abraham Maslow and Carl Rogers were all advocates of the uniqueness of individuals. Behaviorists and cognitive theorists in contrast, emphasize the importance of universal principles, such as reinforcement and self-efficacy.

4. Active versus reaction:

This question explores whether human's primarily act through individual initiative active or through outside stimuli. Behavioural theorists typically believe that human's are more active in their role. Most modern theorists agree that both are important, with aggregate behaviour being primarily determined by traits in their interactions with short term behaviour, whereas situational factors in interactions with aggregate behaviour are direct predictors of behaviour on the short term.

5. Optimistic versus pessimistic:

Personality theorists differ with regard to whether human are integral in the changing of their own personalities. Theories that place a great deal of emphasis on learning are often more optimistic than those that do not.

Personality theories [edit source/editsbeta]

The study of personality is based on the essential insight that all people are similar in some ways, yet different in others. There have been many different definitions of personality proposed. Moreover many contemporary psychologists agree on the following definitions:

Personality is that pattern of characteristic thoughts, feelings and behaviours, that distinguishes one person from another and persists over time and situations of self-actualization or the trait of extraversion. Idiographic psychology is an attempt to understand the unique aspects of a particular individual. The study of personality has a broad and varied history in psychology with an abundance of theoretical traditions. The major theories include dispositional (trait) perspective, psychodynamic, humanistic, biological, behaviourist, evolutionary and social learning perspective. However many researchers and psychologists do not explicitly identify themselves with a certain perspective and instead take an eclectic approach. Research in this area is empirically driven, such as dimensional models based on multivariate statistics, such as factor analysis, or emphasizes theory development such as that of the psychodynamic theory. There is also a substantial emphasis on the applied field of personality testing. In psychological education and training, the study of the nature of personality and its psychological development is usually trait theories.

According to the Diagnostic and Statistical Manual of the American Psychiatric Association, personality traits are "enduring patterns of perceiving, relating to and thinking about the environment and oneself that are exhibited in a wide range of social and personal contexts". Theories generally assume that (a) traits are relatively stable over time; (b) traits differ among individuals, and (c) traits influences behavior. They consistently are used in order to help define people as a whole. Traits are relatively constant; they do not usually change. Traits are also bi-polar, they vary and do not along a continuum between one extreme and the other (e.g. friendly vs unfriendly).

The most common models of traits incorporate three of five broad dimensions or factors. All trait

theories incorporate at least two dimensions, extraversion and neuroticism, which historically featured in Hippocrates' humoral theory.

Gordon Allport delineated different kinds of traits, which he also called dispositions. Central traits are basic to an individual's personality, while secondary traits are more peripheral. Common traits are those by which an individual may be strongly recognized. In his book, *Personality: A Psychological Interpretation*, Gordon Allport (1953) both established personality psychology as a legitimate intellectual discipline and introduced the first of the modern trait theories.

Hans Eysenck believed just three traits, extraversion, neuroticism and psychotism were sufficient to describe human personality. Difference between Cattell and Eysenck emerged due to preference for different forms of factor analysis. With Cattell using oblique, Eysenck orthogonal rotation to analyse the factor that emerged when personality questionnaires were subjected to statistical analysis. Today, the Big Five factors have the weight of a considerable amount of empirical research behind them, building on the work of Cattell and others. Eysenck, along with another contemporary in trait psychology named J.P. Guilford (1959), believed that the resultant trait factors obtained from factor analysis should be statistically independent of one another; that is, the factors should be around [rotated] so that they are uncorrelated or orthogonal [at right angles] to one another.

* Lewis Goldberg proposed a five-dimension personality model, nicknamed the 'Big Five'.

- 1. Openness to Experience:** The tendency to imagine independent, and interested in variety VS practical conforming and interested in routine.
 - 2. Conscientiousness:** The tendency to be organized, careful and disciplined VS disorganized, careless and impulsive.
 - 3. Extraversion:** The tendency to be sociable, fun-loving and affectionate VS retiring, somber and reserved.
 - 4. Agreeableness:** The tendency to be soft-hearted, trusting and helpful VS ruthless, suspicious and uncooperative.
 - 5. Neuroticism:** The tendency to be calm, secure and self-satisfied VS anxious, insecure and self-pitying.
- The Big Five contains important dimensions of personality. Traits are considered to be statistical generalizations that do not always correspond to an individual's behaviour.
- The importance that genetic influences have on personality characteristic can change across a five year period, age differences create more variable even within a family. So that best comparisons are found using twins. Twins typically share a family environment called a shared environment because they may share other aspects like teachers, schools and friends. A non-shared environment means completely different environment for both subjects. Biologically related children who are separated after birth and raised in different families live in non-shared environments. Identical twins separated at birth and raised in different families constitute the best cases for heredity and personality because similarities between the two are only to genetic influences vulnerability was a factor in this study that was taken into considerations.

regarding the issues of genetic influences on vulnerability. The study concludes that the monozygotic co-twins would be more similar than dizygotic co-twins in change over time. The data concluded that there were no significant difference for others variances between the monozygotic and dizygotic co-twins.

Another current open questions is whether genetic influences are important for the likeliness of co-twins to change in the same way over a period of time. A link was found between the personality trait of neuroticism and a polymorphism called HTTLPR in the serotonin transporter gene, but this association was not replicated in larger studies. Other candidates gene studies have provided weak evidence that same personality traits are related to AVPR1A ('ruthlessness gene') and MAOA ('warrior gene'). Genotypes or the genetic make up of an organism influenced but don't fully decide the physical traits of a person. Those are also influenced by the environment and behaviours they are surrounded by. For example, a person's height is affected by genetic, but if they are malnourished growth will be stunted no matter what their genetic reading says. Environment is also not completely responsible for an outcome in personality. An example from psychobiology of personality by Marvin Zuckerman is alcoholism. Studies suggest that alcoholism is an inherited disease, but if a study with a strong biological background of alcoholism in their family tree is never exposed to alcohol, they will not be so inclined regardless of their genome.

The question is open to debate whether there are genetic influences on the tendency of the co-twin to change without keeping in mind the direction of the change. Another factor that can be addressed is biological versus adoptive relatives and can be clearly seen in what is a real life experiment, adoption. This creates two groups, genetic relatives (biological parents and sibling(s)) and environmental relatives (adoptive parents and sibling(s)). After studying hundred of adoptive families, the discovery was that people who grow up together, whether biologically related or not, do not much resemble one another in personality. Characteristics such as extraversion and agreeableness, adoptees are more like their biological parents than their adoptive parents. However, the minute shared environment effects do not mean that adoptive parenting is ineffective. Even though genetics may limit the family environments influences on personality, parents do influence their children's attitudes, values, taste manners and politics. In adoptive home, child neglect and abuse and even divorce between the parent is uncommon. In accordance to that, it is not surprising, despite a somewhat greater risk of psychological disorder, most adopted children excel especially when they re-adopted as infants, in a strong connection with one or even both of their adoptive parents. As Psychology is the study of the living behaviour in a scientific way, is called a Psychology and Personality is the development of one behaviour in a human kind, it studies an inner appearance as known Personality.

— 1 —

When we tackle obstacles, we find hidden reservoirs of courage and resilience we did not know we had. And it is only when we are faced with failure do we realize that these reservoirs were always there within us. We only need to find them and move on with our lives. - A. P. J. Abdul Kalam

Importance of human rights

—Supriya Dey
BA 4th Sem.
Dept. of Pol.Scis.

Human rights are inherent and inalienable rights which are due to an individual by virtue of being a human being. These rights are necessary to ensure the dignity of every person as a human being irrespective of one's religion, nationality, language, sex or any other factor. The concept of human rights is based on the assumption that human beings are born equal in dignity and rights. These are moral claims which are inalienable and inherent in all human individuals by virtue of their humanity alone. These claims are articulated and formulated in what is today understood as human rights. These rights have been translated into legal rights, established according to the law-creating processes of societies, both national and international. The basis of these legal rights is the consent of the governed.

The rise of human rights activism in the 1960s and 1970s, through with it a growing recognition of the potential of the human rights framework to effect social change and the importance of human rights awareness for all segments of society. Furthermore, as economic integration and advancement in

communications have brought all parts of the world closer together, human rights are increasingly recognized as a unifying moral force that transcends national boundaries and empowers ordinary people everywhere to demand that their governments be accountable for the protection and promotion of their human rights. This new awareness is not limited to educated elites in developed countries. Around the globe, grass roots organizations of all kinds are using the human rights framework to advocate for social change, for example opposing violence against women, toxic dumping, child labour and lack of housing or health care as human rights violations. As a result, these groups are providing innovative human rights education to the communities they serve: the poor, refugee and migrants, indigenous peoples, rural and migrant peoples and minorities of all kinds. They have effectively redefined human rights education in the process.

The importance of human rights today, the highest aspiration of the common man is to lead a life where he can enjoy freedom of speech, freedom of belief and have no fear of suppression. Disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind. Human Rights is a much used and abused term today and is used extensively for political gain. The term is used to defend human freedom as well as destroy it. People tend to attach importance to particular human rights issue according to ideology and political convenience. If a man is not to have recourse on rebellion against tyranny and oppression, taking law into their own hands, 'Human Rights' should be built into the society as a natural rule. As a last resort only, law should be applied as protection. Just after the World War II, it was realized that citizens of many countries lived under the control of tyrants, having no recourse other than war, to relieve inhuman treatment given to them. Unless some way was found to provide justice to these people, they could revolt and become the catalyst for another wide-scale war including the nuclear war. This concern, led to the majority of governments in the world to come to the conclusion that basic human rights must be protected. This is not only for the sake of the individuals and countries involved, but to preserve the human race.

Knowledge about human rights can empower individuals and promote remedies for specific problems. Values of tolerance and equality promote the reduction of friction within society. Proper observance of human rights promotes the security and well-being of all people, including people living in countries overseas. Action on human rights develops our ideas about the kind of society we want to live in. Such action can include community discussions, incorporation by administration of human rights ideas into practical programs, activism on issues of concern and legislation by government, among many other things. Human rights are a prominent part of how people interact with others at all levels in society - in the family, the community, in educational institutions, the workplace, in politics and in international relations. It is vital therefore that people everywhere should strive to understand human rights, it will be easier for them to promote justice and the well-being of society.

Those who cannot work with their hearts achieve but a hollow, half-hearted success
that breeds bitterness all around - A. P. J. Abdul Kalam

Philosophical Issues of Twenty First Century

-Pinkumoni Barua
Asstt. Prof. Dept. of Philosophy

From the historical point of view if we look at all the things, philosophy has discussed through ages. I think it may be the only area facing so many-sided and colourful problems. As a vast subject, philosophy deals with all the valuable problems which affect our life. Therefore, philosophy is called the mother of all subjects. The subject matter of philosophy in the ancient understanding and the writing of the traditional philosophers was all intellectual striking. This included the problems of philosophy as they are understood today but it also included many other disciplines, such as mathematics and other natural sciences. It includes within its scope every branch of enquiry and excludes none.

and following the nature of these purposes philosophy is still trying to achieve the highest and every possible level of putting the mind to perfection. The question is, can this process be continued in twenty-first century. Today philosophy is an attitude- a way of looking at things in a complete innovative way. Philosophical knowledge should enable us to cultivate an attitude that can adopt an entirely different perspective from the one that we normally adopt. Actually philosophy helps us to make a distinction between the real and the unreal. It is a problem for us to make a distinction between these two aspects. Often we wrongly develop an attachment for the unreal and the transient and hence suffer.

Today philosophy is in front of entirely a new pattern of life. According to me, the questions that philosophers should ask themselves today are mainly about the civic virtues, moral issues based on valuable system, which define and guide behaviour of the individuals in daily life, politics and the way it's being practise with profit for the people; however there is something which affect us all today, and even if it does not take big part in the philosophy area and even if we have to take away from the deeply philosophical interests and fields, we are obligated to come into philosophical position about this problem.

All are familiar with the events which are really happening today everywhere and it is not a secret for us. We mechanically live our life leaving behind the real values and interests. Values, moral, ethic rules and virtues are simply replaced and broken through new reality, replaced by a whole new system, which task is to lead, in best ways, reasonable human kind. The gold and positive way of evolutionary development is call in question and not in relation with economical or industrial progress, but in the spiritual one. Of course the topic can't be just closed with these few problems, there are many other issues, philosophy should discuss. Consider and moreover, if it is possible to take part in resolving them. Firstly, the crimes these days are becoming more brutal and unreasonable. What is worse is that some of them are committed by the young part of the society. This is very disturbing and a matter of great concern and it is partly caused by the cracks in some systems, like receiving good moral education in early age. A good philosophy teaches us that one should not run after inheritance rather should always strive to earn on our own and make our own destiny and to be a good HUMAN being. Nowadays many of us have forgotten the morals and humanity in life. Many of us have become a system, which only knows what money is and materialism. Finally it starts a never ending circle which only one peaceful mind, one positive man with full of virtues. Consciousness and good visions can overcome. Can we be the man that will do that? In my opinion the questions considering philosophy today is mainly about the inner changes in every individual, caused by the chaos in twenty-first century.

—:—

How old is the Earth

Philosophy has always tried to resolve, define and research all the ethical, social, moral, mental, spiritual and other vital issues faced by the human being. So, it can be believed that philosophy is essentially tied up with life. The contemporary Indian thinker asserts that even after realising moksha the work of the individual is not over, he has to continue to be in the world, living in the midst of fellow-men, helping them in making their lives healthier and purer. No man, they say, can be saved unless the face is saved. Considering

Earth is millions and millions of year old. Infact, our planet is four thousand six hundred million year old. When the Earth's age (46 billion years) is written as a number, it looks like this 4,600,000. It's hard for us to imagine anything so old.

Values, Value-oriented Education and the Young generation

—Deepanjan Das,
Assist. Prof.
Dept. of Education

Since ancient times, education is viewed as the transmission of values and accumulated knowledge of the society. Educational institutions are supposed to be the houses of ethics and values. Education is designed to guide the students in learning a culture, moulding their behaviour in the ways of adulthood and guide them towards their eventual role in the society. The role of education to achieve the goal in life has become more crucial in the present-day problems of the society where values and morals are said to be deteriorating.

"Value" is one of the basic terms which cannot be fully defined. The word value is derived from the Latin word "valere" which means "to be well", "to be strong" and therefore "to be valid". In the most elementary sense, value means whatever is actually liked, prized, esteemed, desired, approved or enjoyed by anyone at a time, values refer to ideals, beliefs, norms which a large majority of members of society hold. A value implies anything or objects that people cherish and worthy of acquisition. The values are guiding principles of life which are conducive for all-around development of an individual. Values are the standards, guidelines of an individual's life. Values are helpful for survival. The role of values in one's life is very significant, since ancient time, we can observe that values are essential part of our life, it moulds our behaviour, character, helps to become a good human being. A widely accepted concept of value in ancient philosophy idealism is truth, goodness and beauty better known as "Satyam", "Shivam" and "Sundaram". Like that, Buddhist philosophy and Jain philosophy accepted the concept of values.

Moral, social, aesthetic, spiritual all these values are important element of character and personality of the younger generation. No one is born with values. They are acquired, learnt and developed through the individual's experiences and socio-cultural interactions, and education always helps in developing values.

At present, the younger generation are involved in number of anti-social activities. Because they don't understand the importance of values in life. They don't have the spirit of patriotism, cooperation unity and the good qualities. So majority of them are engaged in some crimes like dishonesty in examination, corruption, violence, rapes, robberies, murders, molestation, frauds, eve-teasing, bride burning and many more. Disrespect of teachers, elders and rules of institutions, selfish behaviour, ragging, addiction to bad habits, drug abuse etc. all these are increased in the youth day by day.

To minimize such serious problem of our society, it is realised to provide value. Based education to the youngs in home and institutions. Science and technology has largely affected in the growth of values in the youths. Today they are confused about their value system. They find

their elders asking them to develop values, but themselves not practising them. This hypocrisy on the part of the elders lead to value conflicts in the minds of the youngs. This happened because of the far-reaching socio-cultural and political changes in the system. Besides these, there is a break down of traditional values without proper placement, lack of adequate role models, conflict ideologies and double standard practised by people in position of power and influence. As a result the youth have become unrest and the problem of student indiscipline has risen. The scene in our country is even more alarming. So, to minimize such serious problem, value-based education is a powerful device. The education leads the individual to realise one's potential and to achieve something higher in life is value-based or value-oriented education. Value education means a positive effort for bringing about a synthesis of physical, intellectual, emotional, aesthetic moral and spiritual values in a human being. It can provide information on values to students, enables them to grow into beings and transcend narrowness, selfishness and partial ideas and attitudes.

Moral education, environmental education, population education, human rights and duties, health, Indian cultural education, Yoga education, physical education, history of Indian freedom movement, religious education are selected as the components of value education. Ancient Indian educational system imparted instructions in values through different techniques. Late, in the present day also our educationists and policy makers have felt the need of value education to the students right from the primary to the university stage. The University Education Commission (1948-49), Secondary Education (1954-55), National Policy in Education, 1986 have given stress on providing value education for the present society, although the need of value education was felt from time to time but the target practically could not be achieved.

At present every one realises that value education is needed for everyone. Specifically it is very helpful for young generation in many ways. It develops a balanced personality, vocational efficiency to adjust properly with the environment, provides citizenship training, inculcates good habits, develops cultural values develops qualities like respect for one another, cooperation, sacrifice, mutual understanding, all-social efficiencies and democratic attitudes. In this way value oriented education can be imparted in young generation through the family, the school, the teacher and the society to lead a healthy social and personal life. Thus value education has played a vital role in making an individual aesthetically refined, culturally rich, emotionally stable, mentally alert, morally upright, physically strong, spiritually sound and socially efficient.

So, an educationist has rightly remarked, 'A nation with atomic power is not a strong nation, but a nation with people of strong character is indeed a strong nation. If a nation has to be strong, the character of the people of that nation needs to be elevated. For this purpose, value based education is an indispensable device.'

Women...some issues

Subash Umla
Asstt. Professor, Department of Management
Faculty of Commerce, Narang Anchalik Mahavidyalaya

The earth would have never been beautiful, if there were no women. She is the mother who shows us the first light on earth. She is the sister sharing our childhood. She is the girl who brings delight in our eyes in our youth and she is the wife who is loyal and supportive. They are the one who makes our life complete. And we are proud of same. However this is only one half story of women. Most of the time we tend forget or oversight their desires, dreams, potentialities and their abilities. We are more comfortable with their role as mother, sister, girl friend and wife. And we expect all the women to dutifully execute all their respective predefined duties. Is this justified? In the name of protection we put lots of restrictions among women since their birth to their

death and at the same we give more liberty and advantages to the man. Is this rational? We are all doing this because we are taught to do same since our birth. And in this process we lost many dreams of many women. Why men are given more preference in all field than women? Why the society expects them to be anti stereotype? Who are responsible for such situation of women? Aren't women folk equally responsible with men folk?

In television serials women [or men] are shown as the one who has to preserve the cultural ethos of the society. They are shown as item girl in movies regularly. If we want our society to be rational, than we

must first find the answers to above questions and have to stop such stereotyping. We have to stop brainwashing of our children at our home. We should stop telling our kids that you are a girl and you should not do it. We should teach and train our children to regard opposite gender as equal as theirs. It is the high time to change our mindset towards women. And such a began from home only. The rising crime against women have to stop, it is possible only when we disseminate gender business or discrimination.

Many a time it is also found that women herself become the obstacle for their development and empowerment. Opportunities are provided but they fail to capitalize it. Most of the time, it is their lack of confidence. But, let me tell our women member of the society there is nothing a man can do and women can't. A women can do anything a man is use to do provided she has enough guts and confidence. Take for example earlier women were not expected to be field soldier but today they are confidently carrying rifles and guarding the Bangladesh border. So, if women wants equal footing along with man than she has to say 'if a man can, I can too'. The women have to recognize their abilities and potentialities and should gather courage to counter their exploitation. Yes they alone can't, we all the members of the society have to encourage our women folk to come forward and live a life full of dignity without any discrimination. I would like to mention the role of mothers is paramount because she is the most capable person to shape the mind set of both girl child and boy child.

Let's treat all gender equally and humanly. Let's provide opportunities for developing the potentialities to all irrespective of gender. Let's promise the new generation for a world of equality and lets erase all the gender stereotyping. Let's provide equal care, opportunity, dedication, and life. Today is the right time to change and right person to start with is self.

DIGRAM

गुवाहाटी

If solid wastes are not managed properly, there are many negative impacts that may result. Some of the most important are mentioned in the following way. Of course, the relative importance of each depends very much on local conditions. Uncollected wastes often end up in drains, causing blockage which results in flooding and unsanitary conditions. Flies breed in some constituents of solid wastes, and flies are very effective vectors that spread disease. Mosquitoes in blockade drains and in rainwater that is retained in discarded cans, tyres and other objects. Mosquitoes spread diseases, including malaria and dengue. Rats find shelter and food in waste dumps. Rats consume the spoil food, spread disease, damage electrical cables and other materials and inflict unpleasant bites. Unmanaged waste degrades the urban environment, discouraging efforts to keep streets and open spaces in a clean and attractive condition. Sustainable management of solid waste is a clear indicator of the effectiveness of a municipal administration - if the provision of this service is inadequate, it fetches in public protest and agitation. Waste, that is treated or disposed off in unsatisfactory way can cause severe aesthetic nuisance in terms of smell and appearance. Uncollected wastes often end up in drains, causing blockages, which result in flooding and in sanitary conditions. Polluted water flowing from waste dumps and disposal sites can cause serious pollution of water supplies. Chemical wastes (especially persistent organics) may be fatal or have serious effects if ingested, inhaled or touched and can cause widespread pollution of water supplies. Plastic bags are a particular aesthetic nuisance and they cause the death of grazing animals, which eat them. Dangerous items such as broken glass, razor blades, hypodermic needles and other healthcare wastes, aerosol cans and potentially explosive containers and chemicals from industries may pose risks of injury or poisoning, particularly to children and people who sort through the waste. Fires on disposal sites can cause major air pollution, causing illness and reducing visibility, making disposal sites dangerously unstable, causing explosions of cans, and possibly spreading to adjacent property. Methane, one of the main components of landfill gas is produced by the decomposition of wastes, can be explosive if it is allowed to accumulate in confined spaces such as the cellars of buildings. Liquids and fumes, escaping from deposits of chemical wastes can have fatal or other serious effects. Dumps of construction waste and abandoned vehicles block streets and other access ways. Waste items that are recycled without being cleaned effectively or sterilized can transmit infection to later users. Aerosols and dusts can spread fungi and pathogens from uncollected and decomposing wastes. The open burning of waste causes air pollution; the products of combustion include

In Guwahati population has increased very rapidly within a very short period of time.

As the growth of which is a problem for authority to dispose properly. Due to lack of proper amenities people dispose it haphazardly and unscientific manner also. The unscientific disposal of municipal solid waste polluted the environment. Over population, urban and housing development, industrial development or any of these "development projects" can easily have major environmental health implications.

The disposal of municipal solid waste in Guwahati is not safe. Owing to lack of public awareness, the domestic and commercial wastes are dumped in open places like road sides and open plates. Uncollected wastes providing food and breeding sites for insect, bird and rodent disease vectors. Animals feeding on solid waste providing a food chain path for transmitting animal and human diseases. In Guwahati city the uncollected wastes retaining water and clogged drains, thus leading to stagnant waters which encourage mosquito vector abundance.

The improper disposal of municipal solid waste makes the city unhealthy. It may be some time visually or some time non visually. The haphazard and indiscriminate disposing of municipal solid waste effect-

on the air in some pockets in the city. Polluted dust particles of air producing from throwing waste different sources stands as a threatening to the city dweller. The problem is mainly acute along road where wastes are accumulate whole day and vehicle are passes over them. The open dumping of solid waste makes leachates when it touch with water. The leachate percolate to the surface of the earth contaminated the soil and water. Finally the open dumping, burning and improper disposal of waste effect on the air, water and soil also.

The most serious problem due to indiscriminate disposal of solid waste in Guwahati is ground water contamination. When water filters through waste and disposed material, chemicals in the material may dissolve in the water, a process called leaching. The resulting mixture is called leachate. As water percolates through municipal solid waste, it makes a leachate that consists of decomposing organic matter combined with iron, mercury, lead, zinc and other metals from rusting cans, discarded batteries and appliances. It may also contain paints, pesticides, cleaning fluids, news paper ink and other chemicals. Contaminated water can have a serious impact on all living creatures especially on human health. The people generally use water from different sources. It is generally assumed that the water collected from ground is safe because it is generally not exposed. If ground water is contaminated by different types of attributes it is unknown by the users. They think that colorless and odourless water is safe one and so they use it, without a thought about bad effects of it.

Open dumps generate various environmental and health hazards. The decomposition of materials produces methane, which can cause fire and explosions and produce strong leachates, which pollute surface and ground water. It ruins the natural beauty of the land. The West Boragao dumpsite constitutes health hazard even to all passers-by due to the obnoxious smell oozing from the activities of micro-organisms on the uncontrolled waste during the wet season. In the same vein, the ensuing smoke that fills the air from the uncontrolled burning of solid waste during the dry season constitutes serious environmental pollution, adversely affecting solid waste workers and pickers. Toxic and hazardous wastes when burnt with others sold waste like asbestos fiber may introduce potential carcinogenic fiber to the smoke plume.

Landfill fires emit a variety of pollutants that have the potential to affect the health of people exposed to the smoke. The incomplete combustion of refuse burning emits particulate matter, carbon-monoxide which is a common by-product of the incomplete combustion offutes such as paper, cardboard and wood, acrolein, formaldehyde and other pollutants depending on the composition of waste. The leftover food and kitchen wastes attracts birds, rats, flies and other animals to the dump. Animals feeding at the dump may transmit diseases to human living in the vicinity. Prevention of human being health hazard and vector borne diseases is possible. There should be a minimum standard of hygiene practiced at each individual's level. Disposal of different wastes must be in such a manner that it is away from the source of drinking water. This will prevent contamination of the water with disease causing trace elements. Proper disposal of Municipal Solid waste is one of the most important requirements for prevention of air borne as well as soil born diseases. So, people of the city should practice the proper disposal of municipal solid waste to prevent the health effects because "prevention is better than cure".

One of the very important characteristics of a student is to question. Let the students ask questions. „A. P. J. Abdul Kalam

Importance of English

Dhiman Singh
B.Com 1Ind year

Indians have been familiar with the English language since the starting of the British colonization two centuries ago. Indians felt that knowledge of English would help them to understand the progressive ideals of the west as well as to enjoy high status.

While a majority of the people feel English language is an unhealthy consequence of colonialism, which deserves to be discarded both internally and externally. Through the arguments of both sides are reasonably sound, the debate is not won decisively. The dispute over status of English therefore still continues, with the changes of its resolution rather remote. Those opposing English base their argument off the premise, that India with its vast diversity, rich culture, language and dialects should not have any important language to link its people. Rather they say that Hindi, which is the most popular and prevalent among Indian languages, could function as the link language. They argue that, if English enjoys importance, popularity and pass in to oblivion. The fact that at the time of independence, all Indian languages commanded popularity and recognition, despite the supremacy English enjoyed until then, indicates that the popularity of English was not at the expense of Indian language.

The Indians extend their arguments in favour of English on the grounds that along with French and Spanish, it is most widely spoken and understandable language world wide, and that in Indians, best interests English be encouraged for Indian's need for knowledge and expertise from broad to progressive to make English language indispensable. There are many countries in the world both developed and developing, where English is hardly understood, but are progressing and prospering.

In India, an attitude to English has a bearing on the mentality of the people. Our problem is that the country continues to identify English colonialism and oppression our country suffered under it. Here people felt, to realize that English is just a language native to British Island and spoken in much of North America and Southern Africa and the whole of Australia and Newzealand. Another problem is the attitude of those Indian's who know English, towards others. It is the attitude that deserves to be opposed rather than English language. Most of the problem related to the use of English can be solved, if we read ourselves of our mistaken prejudices. We should have a balanced and objective view of the English language, which should help us to see it as any other language.

With the development of countries and education, English may be popular to every Indians. So we have the need to learn much more of education. In the progress of education everybody knows about the use of English.

Then, we can help our country in the use of language with our native language. And English must live and take enjoyment with other countries of the world.

Teacher's Day Poem

"Sunlight
B.A.
2nd Sem"

But I can't
I am a Women and I can't.

I want to fly like the Loft,
But I can't

I want to fly higher like an Arctic Tern
But I can't

I want to swim like a whale into deep Pacific
But I can't

I want to touch the height of Everest,
But I can't

I want to feel the heat of Equator
But I can't

My thoughts tempered
My desires compromised

My voice crashed
My life is not mine

I want it back in total!

Although teachers are not born,
But made
They are considered special people
Created by God,
For the betterment of humanity
The are regarded as the,
Reservoir of Knowledge, love and compassion
The best teachers known to the world,
Are not just popular for being the reservoir of
knowledge
But also for their commitment and service.

HAPPY TEACHER'S DAY!

Sitting L to R : Debpjit Sarma, Hemanta Kr. Rabha, Mrinal Medhi, Rosie Patangia, Nira Das, Reeta Sarma, Preetymala Baruah, Archana Bora, Sangeeta Barthakur.

Reality of facebook

Sureshli Hajong (Sonam)
B.Com 2nd Sem

facebook facebook...
We forgot our text book.

Now a days we love facebook friends
Better then real friend
In real life we don't even talk to
But in real life each other

But in facebook...
"Hey Bro/Sis/Swhrt/Jamy/Miss/Love you!"

I really get fledge up what such type
of conversation
I really love my real friends a lot...
Meenakshi, Puja and Manisha
But now, we didn't to talk each other
Then also I will love you all forever

A Special Teacher

Sanjukta Roy
B.A. 3rd semester

When I started in College
This day seemed so far away
Now it's here and I can't believe
That time has passed so quickly...
But through your encouragement & guidance,
I feel I'm ready for tomorrow's challenge.
Teacher's play such an important part
In shaping and guiding...
Specially teachers like you
Thank for caring so much.

Dr APJ Abdul Kalam's quotes for students motivation

1. "Man needs difficulties in life because they are necessary to enjoy the success."
2. "Excellence is a continuous process and not an accident."
3. "All Birds find shelter during a rain.
4. "But Eagle avoids rain by flying above the Clouds."
5. "Failure will never overtake me if my definition to succeed is strong enough".
6. "If you fail, never give up because F.A.I.L means "First Attempt In Learning".
7. "End is not the end. In fact, E.N.D. means "Elliott Never Dies".
8. "If you get No as an answer, remember N.O. means "Next Opportunity".
9. "So Let's be positive.
10. "It is very easy to defeat someone, but it is very hard to win someone".
11. "Unless India stands up to the world, no one will respect us. In this world, fear has no place. Only strength respects strength."
12. "I will not be presumptuous enough to say that my life can be a role model for anybody; but some poor child living in an obscure place in an underprivileged social setting may find a little solace in the way my destiny has been shaped. It could perhaps help such children liberate themselves from the bondage of their illusory backwardness and hopelessness?"
13. "Thinking should become your capital asset, no matter whatever ups and downs you come across in your life.
14. "Thinking is progress. Non-thinking is stagnation of the individual, organisation and the country. Thinking leads to action. Knowledge without action is useless and irrelevant.
15. "Knowledge with action, converts adversity into prosperity."
16. "While children are struggling to be unique, the world around them is trying all means to make them look like everybody else."
17. "For me, there are two types of people: the young and the experienced."
18. "One of the very important characteristics of a student is to question. Let the students ask questions."
19. "Once your mind stretches to a new level it never goes back to its original dimension".
20. "Science has revealed that the human body is made up of millions and millions of atoms. For example, I am made up of 5.8×10^{27} atoms."
